International application No.

PCT/US00/24213

V.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
	citations and explanations supporting such statement

### 1. statement

Novelty (N)	Claims Claims	3 and 6-11 1, 2, 4, 5, 12, 13	YES NO
Inventive Step (IS)	Claims Claims	3 and 9-11 1, 2, 4, 5-8, 12, 13	YES NO
Industrial Applicability (IA)	Claims Claims	1-13 NONE	YES NO

#### 2. citations and explanations (Rule 70.7)

Claims 1, 2, 4, and 5 lack novelty under PCT Article 35(2) as being anticipated by Razzaque et al.

The claims are drawn to a nucleic acid molecule which encodes a polypeptide having a sequence variant of SEQ ID NO. 2 comprising a Thr residue inserted after Ala at position 26 in a vector.

Razzaque et al. teaches a cloned fragment of the CMV genome, termed the EM plasmid. This fragment comprises the genomic region recited in claim 1, thereby clearly anticipating claims 1 and 2. Razzaque et al. does not teach the full length sequence of the EM plasmid; however, the portion of the sequence disclosed in figure 2 includes nearly all of SEQ ID NO: 1. Since the EM plasmid extends well beyond the sequence presented in Figure 1, the EM plasmid inherently comprises SEQ ID NO: 1, and inherently encodes the polypeptide recited in claim 4. Therefore, the teachings of Razzaque et al. anticipate claims 1, 2,

Claims 12 and 13 lack novelty under PCT Article 35(2) as being anticipated by Muralidhar et al.

The claims are drawn to a method and a kit for detecting cmv-IL10 with antibodies that are specific for a cmvIL-10 protein.

Muralidhar et al. teaches a 79 amino acid open reading frame of the UL111a gene encoding the mtrII protein, which encompasses the cmv-IL10 gene. Since these genes overlap, an epitope encompassed by both genes would be inherent. Muralidhar et al. teaches immunohistochemistry of noninfected and HCMV-infected cells and identifies the mtrII oncoprotein was stained with Ab-471 and detected with anti-rabbit IgG conjugated to horseradish peroxidase, see "Immunofluorescence and immunohistochemistry" on page 8698 and therefore anticipates a method for detecting an epitope of cmvIL-10 in an infected sample with ingredients claimed in the kit.

Claims 6-8 lack an inventive step under PCT Article 33(3) as being obvious over Razzaque et al. Razzaque et al. does not teach an isolated cmvIL-10 protein. However, the reference teaches a plasmid encoding the nucleotide sequences that are capable of expressing the cmvIL-10 protein, see the text cited above. Therefore, it would be obvious for the skilled artisan to use the plasmid that expresses the plasmid taught by Razzaque et al. in order to purify and isolate the protein.

Claim 3 meets the criteria set out in PCT Article 33(2)-(+), because the prior art does not teach or fairly suggest plasmid pEF-SPFL-cmv<sub>e</sub>.

Claims 9-11 meet the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest a method of treating a condition by administering cmvIL-10 or a component that is capable of sequestering cmvIL-10 as a method of treating a pathological condition caused by CMV.

(Continued on Supplemental Sheet.)

PCT/US00/24213

## VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

The description is objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 5 because it fails to adequately enable practice of the claimed invention because: Claims 9-11 are drawn to a method of treatment by administering cmvIL-10 to treat a disease that would respond to treatment with cmvIL-10 and a substance that is capable of sequestering cmvIL-10. The description fails to teach treatment of any disease by administering cmvIL-10 or a composition that disrupts cmvIL-10 function. In addition, the description fails to provide evidence that inhibition of IL-10 would have an impact on the CMV life cycle in order to treat any disease associated with CMV infection. There is no teaching in the prior art of cmvIL-10, or the role it has in disease. Therefore, it is uncertain how one skilled in the art would administer an effective amount of cmvIL-10, or what effect it would have on any disease. Redpath et al. teaches that late expression of IL-10 by the immune system is normal in response to a pathogen. However, CMV infection causes premature and transient activation of host IL-10, which interferes with natural host defense by reducing the expression of MHC class II on the surface of cells. Although the reference teaches that inhibition of MHC class II expression was not observed in the presence of neutralizing antibodies to IL-10, there is no teaching that antibody interference with IL-10 had an impact on CMV infection or CMV life cycle. Therefore, due to the nature of the claims, which is drawn to treat any disease with cmvIL-10, or CMV-related disease with an unknown substance that is not known to have a mechanism to interfere with CMV life cycle, or improve immune response against disease, and the state of the art at the time the invention was made, it is determined that undue experimentation would be required of the skilled artisan to make and/or practice the claimed invention.

that is not known to have a mechanism to interfere with CMV life cycle, or improve immune response against disease, and the state of the art at the time the invention was made, it is determined that undue experimentation would be required of the skilled artisan to make and/or practice the claimed invention. Claim 9-11 are objected to as lacking clarity under PCT Rule 66.2(a)(v) because practice of the claimed invention is not enabled as required under PCT Rule 5.1(a) for the reasons set forth in the immediately preceding paragraph.
